EDUCATION

Northeastern University

Bachelor of Science in Computer Science – 3.5 GPA

Boston, MA

Sep. 2023 – May 2027

EXPERIENCE

Software Development Engineer Intern

Jun. 2026 – Present

Amazon

Seattle, WA

- Architected an autonomous, LLM-powered agent that automates end-to-end Fire Tablet Launcher performance regression investigations, replacing a multi-week manual workflow: it reproduces regressions on-device, root-causes them from Perfetto traces and cross-repo diffs, and validates fixes in a closed-loop build-measure cycle
- Shipped agent-diagnosed fixes to production after review, improving WarmStartFluidity from 82.43% to 90.05% and reducing WarmStart latency 55% (3,590 ms → 1,628 ms)

Co-Founder

Sep. 2025 – Present

Ceed CRM

Cambridge, MA

- Building an AI-native, agentic CRM for nonprofits that automates donor engagement workflows, reducing manual operations by 60% and driving 2.5x donor retention
- Converted 5 pilot partners into paying customers ($\approx$ \$11K ARR) through hands-on customer discovery

Software Developer Intern

Jun. 2025 – Aug. 2025

Peer Global Inc.

Newport Beach, CA

- Architected agentic chat workflows and a testing platform (React, Flask, MongoDB) with a 3-tier, multi-persona, modular real-time conversation engine for a consumer app serving 1.2 million+ users
- Built a dynamic prompt-engineering system with context-depth scaling and placeholder matching across personas

PROJECTS

Remora | Next.js, React, TypeScript, Supabase, Gemini API

Mar. 2026

- Won 1st place among 250+ hackers at the Google DeepMind × Breakthrough Ventures Hackathon at MIT
- Built a platform that transforms any GitHub repository (public or private) into a structured, interactive curriculum with dynamically generated LeetCode-style problems and quiz cards
- Leveraged parallelized Gemini calls with optimized search-and-summarization algorithms to analyze massive open-source repositories (Linux, Chromium, TensorFlow) into digestible learning modules in seconds

Discer.io | Next.js, React, FastAPI, Dedalus SDK, OpenAI API

Nov. 2025

- Won 1st place of 194 teams (YC Challenge) and Best Use of Dedalus at HackPrinceton F2025
- Engineered a Scratch-like visual platform for learning agentic AI: a React drag-and-drop block interface plus a FastAPI backend orchestrating parallel LLM-driven agents in a live multiplayer arena
- Integrated the Dedalus SDK for multi-provider LLM routing (OpenAI, Anthropic, Gemini) and custom MCP tooling, backed by a TypeScript/Bun WebSocket physics engine

Pawtograder | Open Source, Next.js, Supabase, Chakra UI, TypeScript

Sep. 2025 – Nov. 2025

- Engineered real-time polling, dynamic survey templates, and group-formation algorithms serving 3,000+ users

Donor Uplift Optimization | Python, XGBoost, Scikit-learn, Pandas, NumPy

Sep. 2025

- Won 1st place of 1,300 hackers at SAS Hackathon 2025, achieving the highest operating surplus
- Engineered a T-learner uplift model (calibrated per-arm XGBoost, class-imbalance weighting, early stopping) and a profit-optimization layer that ranks donors by predicted lift for 15% surplus over baseline

capitalX | React Native, Expo, Flask, Modal, Knot API, Supabase

Mar. 2025

- Won 1st place of 87 teams (Best Use of LLMs, Best Expo Hack) at HackPrinceton S2025
- Built a mobile app that maximizes per-transaction credit-card rewards using a fine-tuned Gemma-27B model served on Modal Labs, Google Cloud Vision OCR for card digitization, and Knot TransactionLink for card switching

TECHNICAL SKILLS

Languages: Python, C/C++, Java, JavaScript/TypeScript, SQL

Frameworks & Libraries: React, React Native, Next.js, Node.js, Flask, FastAPI, XGBoost, Scikit-learn, Pandas

Developer Tools: AWS, PostgreSQL, Supabase, MongoDB, Docker, Git, Vercel, Linux
